Sprint 3: Business Case Change Note

During Sprint 3, our competitor research identified opportunities to expand Festivo's target audience and financial-planning capabilities. While our initial focus has been on parties, the research highlighted how similar planning needs apply to other events, including graduations, weddings, and gatherings that require coordinating guests, services, and shared expenses. Broadening our focus beyond parties could allow Festivo to serve a wider range of users while maintaining its original objective of simplifying event planning through a centralized platform.

Our Partiful teardown also identified features for paid ticketing, attendee contributions, and cost sharing. Combined with interview feedback regarding event expenses, these findings suggest that financial coordination may deserve greater consideration in Festivo's development. We are therefore considering placing more emphasis on budgeting, contribution tracking, and potentially linking users to external payment services.

However, we do not plan to introduce direct payment processing, ticket sales, or host payouts into the Minimum Viable Product due to the additional technical, security, and operational complexity. These capabilities may be considered in future development as we gather more evidence of user demand. Moving forward, we intend to position Festivo as a more versatile event-planning platform rather than one focused exclusively on parties, while maintaining our existing core functionality and project scope.
