Sprint 3: Candidate Risk Entries

Risk 1: Users continue using existing planning methods

Field	Description
Risk	Users may continue using familiar applications, personal contacts, and manual planning methods
Trigger	Existing planning methods continue to meet organizers' needs without a clearly identified problem that would motivate switching to a centralized platform.
Owner	Product Manager
Mitigation	Make event planning easier by combining invitations, RSVP tracking, vendor searches, and budgeting in one platform. Test these features with potential users and improve them based on feedback.
Evidence Id's	Interviews 1, 2 & 3

Risk 2: Users prefer established vendors over unfamiliar businesses

Field	Description
Risk	Users may prefer established personal contacts for party services rather than searching for unfamiliar vendors through Festivo.
Trigger	Existing vendor contacts provide the services organizers need without requiring additional vendor searches or comparisons.
Owner	Data Management Team
Mitigation	Include vendor ratings, reviews, pricing, and service information to help users

	compare businesses and build trust. Test the vendor search process with potential users and improve it based on feedback.
Evidence Id's	Interview 2

Risk 3: Existing invitation tools are sufficient for users

Field	Description
Risk	Users may continue relying on existing invitation and RSVP platforms rather than adopting Festivo's equivalent features.
Trigger	Competitive research confirms that an existing platform already provides Festivo's proposed core invitation and RSVP functionality, limiting these features as a standalone competitive advantage.
Owner	Development Lead
Mitigation	Focus on integrating invitation and RSVP management with vendor research, event information, and resource estimates rather than competing solely on invitation creation.
Evidence Id's	Interview 3, Partiful Teardown, Canva Teardown.
