Business Strategy

This section defines the business strategy behind Festivo and establishes how the project supports its overall goals. It connects the organization's strategy to a measurable business objective, provides market research to justify the need for the project, and defines the scope of what Festivo will deliver.

Organization Strategy

Simplify and improve the event-planning experience by providing users with one centralized platform for organizing and coordinating part services.

Business Objective

Reduce the amount of time users spend searching across multiple websites to plan an event, while achieving at least an 85% user satisfaction score by the end of the semester.

Project Justification

Market research identified scheduling as the most consistent difficulty in event planning. In Phase 1, 80% of participants identified scheduling as the hardest part of planning an event. Phase 2 reinforced this finding, with approximately 62% of participants identifying scheduling as a major consideration and 62% identifying it as the hardest part of event planning. Additionally, approximately 77% of participants reported writing down planning information, with approximately 62% using electronic methods. These results support the need for a centralized application where users can organize event information, scheduling, attendance, venues, and related services in one place.

Scope

A cross-platform mobile event-planning application that centralizes scheduling, RSVPs, venue availability and capacity, party-supply ordering, vendors, and catering. Direct payment processing will not be included, while weather considerations and reservation or order tracking are deferred.
